KFTO: No take zones may not make sense in Hawaii due the highly mobile nature of most our preferred food species. Blanket moratoriums also have shown to be of marginal value as once they are open there tends to be a sudden over fishing frenzy that leaves the fish population just as bad off as before. Possibly, a better solution would be statewide or island specific, individual species moratoriums that allow fishermen

	Sanctuary?
	PARTICIPATION OF THE PROPERTY
	KFTO: Based on numbers taken from The Sanctuary's own literature we question if it would have been any different. At best a few whales, probably far less than 100 out of the current count of 12,000 plus humpbacks, can be directly attributed to Sanctuary involvement. All of these are disentanglements or stranding related. The real savior of the Humpback has simply been the ban on whaling. It seems highly unlikely that they have ever actually directly prevented a collision as is implied by their own 'Top 10'
	Accomplishments'.
